Remote network portal software. Allows remote control of up to four client PCs from a single server PC.

### Product Description

Portico is a remote control software product to view and fully interact with the desktop of another electronic device over a network. The product employs a client/server architecture that provides the ability to either establish point-to-point communication between a single device and single client, or to serve up the desktop of a single device to many clients. A control arbitration scheme ensures that only a single client has control of a device at any given time. In a manufacturing environment, Portico can be used to provide visibility and control to a machine or process from a remote location within the plant. Portico can also be used by an OEM to remotely troubleshoot a customer machine or process over the internet.

### Key Commercial Data

Packing unit	1 pc
GTIN	
GTIN	4046356771153

### Technical data

#### License information

Intended use for the software	Remote desktop control
Type of license	Activation

#### Functions

Basic functions	Remote control software
-----------------	-------------------------

#### Hardware requirements

Hard disk	≥ 100 Mbyte (minimum (client and server))
RAM	≥ 512 Mbyte (minimum)
CPU	Atom™ or above
Interfaces	≥100 Mbps Ethernet LAN

#### Software requirements

Operating system	Windows® 7
------------------	------------

## Software - VL PORTICO SERVER 4 CLIENT - 2701455

### Technical data

#### Software requirements

	Windows® 10
Languages supported	German, English, French, Spanish, Italian
