Dear Valued Customer,

In accordance to PCN A0183 (which presented the addition of a dash between the rating mark in the fuse cover for the MCASE+ Unslotted products. Action taken to clarify the difference between the series Slotted (.PXPS) and Unslotted (.PXP)), Littelfuse will handle an internal trackability system in order to control inventories. During this transition period, internal Littelfuse packaging labels will have a special identification by adding "-DS" as suffix. Production orders will not be affected at all (all orders will be covered accordingly).

Considering this is a running change, this internal management will be procured until transition is completed. (i.e. when stocks of materials without dash mark are depleted from shipping locations).
