### **Features**

- Ultra-low Q<sub>G</sub> For High Efficiency
- Logic Level
- · Light Weight
- New Compact Hermetic Package with Dual Gate
- Source Sense Pin
- Total Dose
  - Rated to 1000 krad
- Single Event
  - SEE immunity for LET of 85 MeV/mg/cm<sup>2</sup> with V<sub>DS</sub> up to 100% of rated Breakdown
- Low Dose Rate at 100 mRad/sec
  - Maintains Pre-Rad specification
- Neutron
  - Maintains Pre-Rad specification for up to 3 x 10<sup>15</sup> Neutrons/cm<sup>2</sup>

### **Applications**

- · Satellite and Avionics
- Deep Space Probes
- High Speed Rad Hard DC-DC Conversion
- Rad Hard Motor Controllers
- Nuclear Facilities

### **Description**

EPC Space FSMD-B series of eGaN® power switching HEMTs have been specifically designed for critical applications in the high reliability or commercial satellite space environments. These devices have exceptionally high electron mobility and a low temperature coefficient resulting in very low  $R_{DS(on)}$  values. The lateral structure of the die provides for very low gate charge (Q<sub>G</sub>) and extremely fast switching times. These features enable faster power supply switching frequencies resulting in higher power densities, higher efficiencies and more compact packaging.

### **Radiation Characteristics**

EPC Space eGaN® HEMTs are tested according to MIL-STD-750 Method 1019 for total ionizing dose validation. Every manufacturing lot is tested for total ionizing dose of Gamma radiation with an in-situ bias for (i)  $V_{GS} = 5 \text{ V}$ , (ii)  $V_{DS} = V_{GS} = 0 \text{ V}$  and (iii)  $V_{DS} = 80\% \text{ B}_{VDSS}$ .

### **Notes**

- Note 1. NEVER exceed the absolute maximum V<sub>DS</sub> of the device otherwise permanent damage/destruction may result.
- Note 2. NEVER exceed the absolute maximum  $V_{GS}$  of the device otherwise permanent damage/destruction may result. We recommend use at no greater than +5 V as the HEMT is fully conducting at this point.
- Note 3.  $R_{\theta,JA}$  measured with FSMD-B package mounted to double-sided PCB, 0.063" thickness with 1.0 square inches of copper area on the top (mounting side) and a flood etch (3 square inches) on the bottom side.
- Note 4. Measured using four wire (Kelvin) sensing and pulse measurement techniques. Measurement pulse width is 80 µs and duty cycle is 1%, maximum.
- Note 5. Operation of the device in the third quadrant region is not recommended.
- Note 6. Guaranteed by design/device construction. Not tested.
