FEATURES

MitySOM-AM57(F) Development Board

Supported Critical Link Modules

- MitySOM-AM57
- MitySOM-AM57F

Key Hardware

- TI AM57xx Processor
- Xilinx Artix-7 FPGA (AM57F Only)

Additional Hardware Included:

- Micro USB & Ethernet Cables
- AC to DC 12V 3.34A Adapter

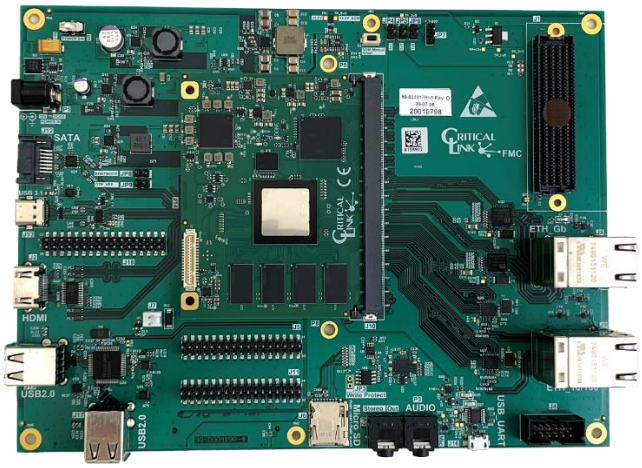
Integrated +1.8V/+2.5V/+3.3V/+5V Power Supplies

Digital Interfaces:

- HDMI (1920x1080p, 60 fps)
- Audio Output and Line Input
- 2 x Gigabit Ethernet
- 2 x 10/100 MBit Ethernet (PRU)
- Board Information EEPROM
- Debug UART to USB Console
- 1 x USB 3.0 DRD Interface (USB-C)
- 4 x USB 2.0 Host (Type-A)
- 1 x SATA 3-Gbps
- Micro SD-Card Socket
- SOM I2C Power and Voltage Monitors

Expansion

- FMC Expansion Header (400-Pin)
  - I2C and Artix-7 FPGA IO
- 3 x 34 Pin 0.1” AM57x GPIO Headers
- External I2C Header
  - 1.8V and 3.3V levels



Software and Documentation:

- Linux Kernel (Based on TI Processor SDK)
- U-Boot (Based on TI Processor SDK)
- Yocto Filesystem (Based on TI Processor SDK)
- Linux and DSP Cross Development SDK
- Development Board Schematics
- Development Board Gerber Files
- Development Board BOM

APPLICATIONS

- MitySOM-AM57(F) Evaluation
- Process Automation
- Factory Automation
- Industrial Automation
- Embedded Instrumentation
- Rich Displays
- Rapid Prototyping

DESCRIPTION

The MitySOM-AM57(F) Development Kit provides all the hardware and software support for system designers and developers to evaluate the Critical Link MitySOM-AM57(F) System on Module (SOM). The MitySOM-AM57(F) Development Kit comes complete with the MitySOM-AM57(F) module that meets your project's needs.

The MitySOM-AM57(F) Development Kit includes on-board dual 10/100/1000 MBit Ethernet, quad USB-2.0 Host ports, and one USB-C USB 3.0 Dual Role Device (DRD) port. A 400-pin FMC expansion port provides access to IO interfaces on the AM57x modules with a Artix-7 FPGA or additional Multi-Functional IO on AM57 modules. The additional triple 34-pin 0.1-inch headers provide access to GPIO and spare IO from AM57xx processor.

The High-Definition Multimedia Interface (HDMI) supports displays a resolution of up to 1920x1080 at 60Hz through a standard HDMI connector, video only. Multi-Media Card (MMC) interface supporting Micro Secure Digital (Micro SD) cards and an I/O Expansion connector for a WiLink 802.11b/g/n Wireless with Bluetooth module from Texas Instruments or a user-designed custom add-on card. All of these interfaces are powered from a single 12VDC input with onboard +1.8V/+2.5V/+3V/+5V power supplies.

A block diagram of the MitySOM-AM57(F) Development Kit is illustrated in Figure 1. Control of the on-board interface hardware and connected Expansion IO cards require proper configuration of the MitySOM-AM57(F) Module. While not required, it is strongly recommended that the MitySOM software development kit and supplied API be used to manage these interfaces.

Feature Descriptions

Debug UART to USB Interface Description

The on-board UART to USB Bridge, FTDI FT230XS-U, provides a serial interface at 115,200 baud 8N1. The USB serial interface, J16 – USB UART, is routed to the primary MitySOM-AM57(F) serial console port, UART3. It allows for general module debug and console interaction.

When connected to a Windows PC, no drivers are required as Windows Update is used to obtain the drivers.

Audio Input/Output Description

Standard 3.5mm / 1/8th inch audio jacks are provided for both stereo audio output, P2, and line-in audio input, P3, from/to a TLV320AIC3104 32-bit audio CODEC connected to MCASP8 on the AM57xx processor on the MitySOM-AM57(F) module.

Linux Driver and API examples are available to support the audio functionality.

USB 3.0 Interface Description

The USB 3.0 interface using a USB type C connector, J13 – USB 3.0, is configured as a dual role interface. It is connected to the USB1 port of the AM57xx processor of the MitySOM-AM57(F) module and is capable of supporting a maximum data bit rate of 5 Gbps and is also backward compatible with USB 2.0 devices. Linux drivers are available.

4-Port USB 2.0 Interface Description

A 4-port USB 2.0 Hub is connected to the USB2 interface of the AM57xx processor of the MitySOM-AM57(F) module. The interface is through two, J15 and J17, dual USB Type-A connectors configured in host mode. Linux drivers are available.

MultiMedia Card (Micro SD) Interface Description

The onboard Micro MultiMedia Card (MMC) slot uses a Micro Secure Digital (uSD) connector J6 which supports SD Standard v3.01. It is compatible with standard (SD), SDHC (up to 32GB), and SDXC (Up to 2TB) cards. By default the MitySOM-AM57(F) Development Kit boots from this interface.

U-Boot configuration information and Linux drivers are available.

Dual Gigabit Ethernet Interface Description

Dual Micrel KSZ9031 network PHYs on the Development Board are each capable of running at 10/100/1000Mbit including link auto-negotiation and RGMII/MDIO capability. A dual industry-standard RJ-45 connector, J8 – ETH_Gb, is provided for external connections. These Ethernet interfaces are connected to the AM57xx processor and may be used to perform remote code download via U-Boot and FLASH upgrades on an attached MitySOM-AM57(F) module.

Critical Link, LLC

Syracuse, NY 13211
PHONE 315.425.4045
FAX 315.425.4048
www.CriticalLink.com

Dual 10/100 Mbit PRU Ethernet Interface Description

The on-board 10/100 Mbit Ethernet interfaces feature Texas Instruments DP83822 network PHYs each capable of running at 10/100 Mbit including link auto-negotiation and MII/MDIO capability. A dual industry-standard RJ-45 connector, J9 – ETH_10/100, is provided for external connection. These Ethernet interfaces are connected to the AM57xx processor's PRU2 on the MitySOM-AM57(F) module.

HDMI (Video Only) Interface Description

A standard HDMI interface for external monitor connection, video only, with a maximum resolution of 1920x1080 is provided. Note that the Texas Instruments AM57x6 devices do not support HDMI.

SATA Interface Description

A standard 7-pin SATA interface, J12 – SATA, is provided for external hard drive connections supporting the SATA standard v2.6. It supports up to SATA Gen 2, 3-Gbps, speeds, and is backward compatible with SATA Gen 1, 1.5-Gbps, devices.

Note that SATA Gen 3, 6-Gbps, devices can be utilized if they can support the slower SATA Gen 2 interface speed.

FMC Expansion Port Interface Description

The FPGA Mezzanine Card (FMC) interface, J1, allows for the use of add-on cards that are designed for the Xilinx Artix-7 on the MitySOM-AM57(F) module. The FMC interface is compatible with Low Pin Count (LPC) FMC expansion cards and provides a subset of High Pin Count (HPC) signals.

It features 2 FPGA Transceiver lanes and 48 FPGA IO pairs (96 IO pins total). FPGA IO signal voltages for the MitySOM-AM57(F) module can be set to either +1.8V, +2.5V, or +3.3V based on the installation of JP4, JP5, or JP6 on the Development Board.

A number of "off the shelf" boards/kits are available from third parties that are compatible with this interface.

The MitySOM-AM57 non-FPGA modules routes additional multi-functional IO to the FMC connector from the AM57xx processor in place of the FPGA IO pairs.

3x 34-Pin Expansion Port Interface Descriptions

Accessible on three 0.1-inch dual-row 34-pin headers, J5, J11, and J18, are 67 AM57xx direct IO signals at 1.8V logic levels, 4 Artix-7 FPGA signals, and +1.8V/GND connections. Multi-functional IO replace the FPGA signals on the MitySOM-AM57(F) modules.

WiFi/Bluetooth Expansion Interface Description

The WiFi/Bluetooth expansion interface, J3, is designed to be directly compatible with the Texas Instruments WL1837MODCOM8I WiFi and Bluetooth expansion card. Linux drivers are available for the TI WL1837 expansion card.

This interface can also be used for a user-designed interface card and features a 4-bit SDIO interface, 2 UART interfaces, a PCM audio interface, and multiple GPIOs.

I2C5 Interface Description

Exposed at the 10-pin connector J4 is the I2C5 interface from the AM57xx processor. Both +1.8V and +3.3V logic level connections for this interface are available on the connector as well as 1.8V and 3.3V power supply and ground connections.

Additionally, the I2C5 interface is connected to the following devices on the Development Kit; USB-C controller, Audio Codec, EEPROM, MitySOM-AM57(F) +5V current/power monitor, and Development Kit voltage monitor.

Baseboard User EEPROM

A 256 Kbit EEPROM, U11, is available for user configuration information on the MitySOM-AM57(F) Development Board. This EEPROM is accessible over the I2C5 interface to the AM57xx processor.

Baseboard Power Supply Monitor

A 4 channel ADC, U10, is installed on the Development Board to enable the monitoring or the +5V, +3.3V, +2.5V, and +1.8V power supplies. This ADC is accessible over the I2C5 interface to the AM57xx processor.

MitySOM-AM57(F) Current/Power Monitor

A power/current monitor, U8, is installed in line with the +5V power to the MitySOM-AM57(F) module. Additionally, this device has a single channel ADC that can monitor the +12V power supply voltage on the Development Board. It is accessible over the I2C5 interface to the AM57xx processor.

Module Configuration Jumpers

Boot Configuration Jumper Description

The MitySOM-AM57(F) Development Board features a 2-pin jumper, JP8, which determines the search order of peripherals from the AM57xx processor for a valid boot image.

By default, the MitySOM-AM57(F) Development Kit boots initially from the SD card.

FPGA IO Voltage Select Jumper

A set of 3 jumpers is provided on the MitySOM-AM57(F) Development Board to select the voltage level of the user-configurable FPGA IO; bank 34 and bank 15. The IO voltages available are +3.3V, +2.5V, and +1.8V. This only applies to the MitySOM-AM57F variants. The IO voltage for the non-FPGA module is +1.8V.

PMIC Power Hold Jumper

The PMIC_POWERHOLD signal from the MitySOM-AM57(F) is exposed on a 3-pin jumper on the MitySOM-AM57(F) Development Board. It controls the module's power state, on/off, from the Development Board.

This signal is designed to be left floating for the default mode of operation. A jumper can be installed for this signal to be pulled up to 1.8V at all times or pulled to GND at all times.

ABSOLUTE MAXIMUM RATINGS

If Military/Aerospace specified cards are required, please contact the Critical Link Sales Office or unit Distributors for availability and specifications.

Maximum Supply Voltage	13.2 V
Storage Temperature Range	0 to 80C

OPERATING CONDITIONS

Ambient Temperature Range	0 to 70C
Humidity	0 to 95% Non-condensing

ELECTRICAL CHARACTERISTICS

Symbol	Parameter	Conditions	Typical	Limit	Units (Limits)
I_{Max}	12V Supply (included AC adapter)	Note 1		3.3	A
Maximum Power Supply Output					
I_{Max}	12.0V Supply[2] for external components	Note 2		1.0	A
I_{Max}	5.0 V Supply[2] for external components	Note 2		3.0	A
I_{Max}	3.3V Supply[2] for external components	Note 2		2.5	A
I_{Max}	2.5V Supply[2] for external components	Note 2		2.5	A
I_{Max}	1.8V Supply[2] for external components	Note 2		1.5	A
Typical Power Usage[3]					
V_S	Supply Voltage	Note 3	12.0		V
I_S	Supply Current	Note 3	2.3		A

Notes:
1. An alternative higher amperage AC/DC 12V adapter is available upon request. Contact Critical Link for details and ordering information.
2. The maximum current supplied to external components should be limited to the specified maximum for the 12.0V, 3.3V, 2.5V, and 1.8V supplies. Please note that for simultaneous power supply usage a larger 12V external power supply may be needed.
3. No external components attached, 100% ARM utilization, FPGA example loaded, 3.3V selected for FPGA IO, and Ethernet are enabled and active.

ELECTRICAL INTERFACE DESCRIPTIONS

MitySOM-AM57(F) Module Interface Connectors – J10 and J14

Each MitySOM-AM57(F) Development Kit includes a MitySOM-AM57 or MitySOM-AM57F module. The Development Board interfaces with the module through a 314-pin MXM connector, J10, and 100-pin Hirose connector, J14. Please see the MitySOM-AM57(F) Datasheet for complete pin-outs of these connectors.

Input Power – P1

The MitySOM-AM57(F) Development Kit power interface, P1, requires a single +12Volt power supply. This input supplies power to the main +5V, +3.3V +2.5V, and +1.8V power supplies on the development board.

Table 1: Input Power Interface Pin Description

Signal	P1 Position
+12V	Center Pin
GND	Outer Ring

Main Power Switch – S1

An input power switch is present on the Development Board, S1, which controls the power input, on or off, from P1.

Debug UART to USB – J16

Table 2: J16 Micro USB Connector Pin Assignments

J16 Pin	J16 Signal	Type	Standard	Notes
1	VBUS	Power	-	
2	D-	I/O	USB 2.0	USB data minus line
3	D+	I/O	USB 2.0	USB data plus line
4	No Connect	-	-	
5	SHIELD	GND	-	

The FTDI FT230XS-U UART to USB controller on the Development Board is connected to the UART 3 interface of the AM57xx processor, as shown below:

Table 3: USB Controller to UART Interface

FTD230XS Signal	SOM Interface Signal	SOM Pin
TXD	DEBUG_UART3_RX	J10 – 279
RXD	DEBUG_UART3_TX	J10 - 281
RTS#	No Connect – 1.0k to GND resistor	No Connect
CTS#	No Connect – 1.0k to GND resistor	No Connect

I2C5 Devices and Interfaces

The I2C5 interface from the MitySOM-AM57(F) AM57xx processor is used on the Development Board for onboard devices as well as available externally at both the FMC connector, J1, and the I2C5 header J4.

Table 4: I2C5 SOM Pin Connections

Module Pin	Signal Name	Note
J10 - 185	I2C5_SCL	4.7k ohm pull-up on development board
J10 - 207	I2C5_SDA	4.7k ohm pull-up on development board

The list below contains the corresponding devices on the I2C5 bus, device description, and addresses that are used on the Development Board:

Table 5: I2C5 Device and Address Information

Device	Device Description	Address
TLV320AIC3104IRHBR	Audio Input/Output Codec – U29	0x18
AD7995YRJZ-150RL7	Development Board +5V, +3.3V, +2.5V and +1.8V voltage monitor – U10	0x29
HD3SS3220RNHR	USB 3.0 Type-C Controller – U12	0x47
CAT24C256WI-GT3	Baseboard 256Kbit EEPROM – U11	0x50
LTC2945IMS#PBF	MitySOM-AM57(F) +5V current/power monitor – U8	0x6E
FMC Connector	FMC Connector – J1	N/A
I2C5 Connector	I2C5 Connector – J4	N/A

Audio Input/Output – P2 & P3

The MitySOM-AM57(F) Development Board provides both audio input, line-in stereo L/R, and audio output, L/R stereo speaker, connections through audio codec TLV320AIC3104, U29. The codec is connected to the I2C5 bus please reference Table 5 for I2C5 address information.

Two 3.5mm/1/8” jacks, P2 for output and P3 for input, utilize the pin-outs shown below:

Table 6: P2 Audio Output Pin Assignments

P2 Pin	P2 Signal	Type	TLV320AIC U29 Pin	Notes
1 - Sleeve	GND	Power	N/A	Audio Ground
2 - Tip	Audio Out Left	O	27	Unbalanced audio output

USB 3.0 Type-C – J13

The MitySOM-AM57(F) Development Board features a USB Type-C connector to the USB 3.0 interface of the AM57xx processor, which is also backward compatible with USB 2.0 devices. An HD3SS3220 MUX, U12, allows for connection of the USB Type-C cable in either orientation and detection of the host/peripheral mode required by the connected cable using the USB-C CC pins. The MUX is connected to the I2C5 bus please reference Table 5 for I2C5 address information.

The USB Type-C interface cannot provide power to the MitySOM-AM57(F) Development Board however it can provide up to 2.8Amps at +5V on the VBUS connections of the USB-C.

The following table lists the interface pin-out for the USB Type-C connector, J13.

Table 8: J13 USB Type-C Pin Out

J13 Pin	J13 Signal	U12 MUX or SOM Pin	J13 Pin	J13 Signal	U12 MUX or SOM Pin

4 Port USB 2.0 Type-A – J15 & J17

The MitySOM-AM57(F) Development Board features a 4-port USB hub, TUSB4041IPAPR – U26, which is connected to the USB2 interface from the AM57xx processor. The 4 USB ports are exposed from the Development Board as two dual USB Type-A Host-only connectors, 5787617-1, J15 and J17.

This interface is a USB 2.0 interface and supports up to 480Mbps throughput speeds and is backward compatible with Full-speed and Low-speed devices.

Each port is capable of supplying a maximum of 1A of current at +5V and an overcurrent detection circuit is connected to each port individually.

The pinout for both J15 and J17 is included in the following table.

Critical Link, LLC
6712 Brooklawn Parkway
Syracuse, NY 13211
PHONE 315.425.4045

MultiMedia Card (Micro SD) – J6

The MitySOM-AM57(F) Development Board provides a MMC v3.01 interface that uses a standard Micro Secure Digital (Micro SD) card slot for the physical interface. This is connected to the MMC1 interface of the AM57xx processor as follows:

Table 9: J6 Micro SD Card Connector

J6 Pin	J6 Signal	SOM Interface Signal	SOM Pin
1	DAT2	MMC1_DAT2	J10 – 171
2	CD/DAT3	MMC1_DAT3	J10 – 169
3	CMD	MMC1_CMD	J10 – 167

Dual Gigabit Ethernet – J9A & J9B

The MitySOM-AM57(F) Development Board provides two RJ-45 connections, with link and activity LEDs, for dual Gigabit 10/100/1000 Ethernet from the AM57xx processor. These external connections follow the standard TIA/EIA-568B pin-out as shown in Table 11 below.

Table 11: J9A & J9B Ethernet RJ45 Pin Assignments

Pin	Signal	Type
1	TX_RX_A_P	I/O
2	TX_RX_A_N	I/O
3	TX_RX_B_P	I/O

8	TX_RX_D_N	I/O

The Ethernet PHY, Micrel KSZ9031, for each interface is located on the Development Board and will auto-negotiate to the speed of the device it is connected to. The Ethernet PHYs are connected to the module through the EMAC0 and EMAC1 interfaces of the AM57xx processor to the pins as shown in Table 12 below.

Table 12: Ethernet PHY to EMAC0 and EMAC1 SOM Interfaces

Dual 10/100 Mbit PRU Ethernet – J8

The MitySOM-AM57(F) Development Board provides two RJ-45 connections, with link and activity LEDs, for dual 10/100 Megabit Ethernet from the Second Programmable Real-time Unit (PRU2) of the AM57xx processor. These external connections follow the standard TIA/EIA-568B pin-out as shown in Table 11 below.

Table 13: J8A & J8B Ethernet RJ45 Pin Assignments

Pin	Signal	Type
1	TX_RX_A_P	I/O
2	TX_RX_A_N	I/O
3	TX_RX_B_P	I/O
4	No Connect	I/O
5	No Connect	I/O
6	TX_RX_B_N	I/O
7	No Connect	I/O
8	No Connect	I/O

The Ethernet PHY, DP83822, for each interface is located on the Development Board and will auto-negotiate to the speed of the device it is connected to. The Ethernet PHYs are connected to the module through the PR2 MII0 and PR2 MII1 interfaces of the AM57xx processor to the pins as shown in Table 12 below.

Table 14: Ethernet PHY to PR2 MII0 and PR2 MII 1 SOM Interfaces

PR2 MII0 – J8A (Lower)		**PR2 MII1** – J8B (Upper)

HDMI (Video Only) – J2

The MitySOM-AM57(F) Development Board provides a 19-pin standard HDMI connector, J2, supporting video only, which is driven by the AM57xx processor. Supporting HDMI 1.4a, the MitySOM-AM57(F) can output up to a resolution of 1920x1080 pixels at 60Hz.

Table 15: J2 Connector Pin Assignments

J2 Pin	J2 Signal	Type	SOM Interface Signal	SOM Pin
1	TMDS Data2+	O	HDMI_TX2_P	J14 – 4
2	Shield	Power	GND	N/A

3x 34-Pin Expansion Ports – J5, J11 & J18

The MitySOM-AM57(F) Development Kit provides three 34-pin general expansion connectors, J5, J11 & J18 which utilize standard dual-row 0.1-inch spaced headers, TSM-117-02-T-DV. The signals for each connector are listed in the following tables.

Table 17: J5 Connector Pin Assignments

Pin	Signal	SOM Pin	Type	Standard	Notes
1	+1.8V	N/A	Power		See Electrical Characteristics for maximum external current rating of +1.8V supply.

WiFi/Bluetooth Expansion Port – J3

The MitySOM-AM57(F) Development Kit incorporates a 100-pin expansion connector, J3, which is directly compatible with the Texas Instruments WL1837MODCOM8I WiFi and Bluetooth expansion card. This connector, MEC6-150-02-L-D-RA1, can also be utilized for a custom expansion card and has the following pinout.

1. See Electrical Characteristics for maximum external current rating of +1.8V and +3.3V supplies.

FMC Expansion Port – J1

Table 21.1 to Table 21.10 describes the pin-out of the 400-pin FMC interface, connector part number ASP-134486-01, on the MitySOM-AM57(F) development board.

The Vselect voltage is based upon the Vselect jumper currently installed on the MitySOM-AM57(F) Development Baseboard, see the FPGA IO Voltage Select Jumper – JP4/JP5/JP6 section for further details.

The I/O "type" is in reference to the signal direction from the SOM/development board.

Please see the following VITA documentation concerning the FMC specification (https://www.vita.com/fmc).

I2C5 Expansion Port – J4

The 10-pin connector J4 allows external connections to the I2C5 interface from the AM57xx processor. Both +1.8V and +3.3V logic level connections for this interface are available on the connector as well as 1.8V and 3.3V power supply and ground connections. Please reference Table 5 for I2C5 address information. The pinout for this connector is shown below.

Table 22: J4 Connector Pin Assignments

Pin	Signal	SOM Pin	Type	Standard	Notes
1	I2C5_SCL_1v8	J10 - 185	I/0	1.8V	4.7k pull-up to 1.8V on Development Baseboard, R37.
2	I2C5_SCL_3v3	J10 - 185	I/O	3.3V	4.7k pull-up to 3.3V on Development Baseboard, R53.
3	I2C5_SDA_1v8	J10 - 207	I/O	1.8V	4.7k pull-up to 1.8V on Development Baseboard, R39.
4	I2C5_SDA_3v3	J10 - 207	I/O	3.3V	4.7k pull-up to 3.3V on Development Baseboard, R54.
5	+1.8V		Power		See Electrical Characteristics for maximum external current rating of +1.8V supply.
6	+3.3V		Power		See Electrical Characteristics for maximum external current rating of +3.3V supply.
7	No Connect		NC		
8	No Connect		NC		
9	GND		Power		
10	GND		Power		

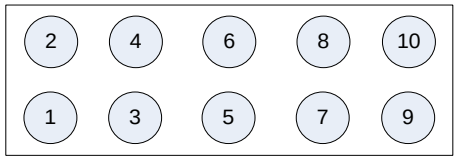

Figure 2: J4 Pin-out (Top View)

5V DC Fan Connector – J7

The 5V fan connector, J7, is a Molex 22-23-2021. The interface is designed to mate with a +5V DC cooling fan and is controlled, enabled by default, by the PMIC on the MitySOM-AM57(F) module. The connector pinout is described below:

Table 23: J7 Pin Out

J7 Pin	Signal	Note	SOM Pin
1	+5V	N/A	N/A
2	GND	Enabled by AUXFAN_EN	J10 – E3-4

Baseboard 256Kbit EEPROM – U11

The MitySOM-AM57(F) Development Board features a user-accessible CAT24C256WI-GT3 I2C accessible 256 Kbit EEPROM. Please reference Table 5 for I2C5 address information. The hardware write-protect feature on this EEPROM is not available.

MitySOM-AM57(F) +5V current/power monitor – U8

The MitySOM-AM57(F) Development Board features a LTC2945IMS I2C accessible power/current monitor and single-channel ADC. Please reference Table 5 for I2C5 address information.

The single ADC channel monitors the +12V power supply on the Development Board through a resistor divider with a ratio of ~0.0826/volt. With this divider, a value of 0.99V is expected for a 12.0V supply voltage.

The ALERT# output, Pin 10, from the power monitor, U8, is connected to MitySOM-AM57(F) Pin J10 – 246.

Development Board +5V, +3.3V, +2.5V and +1.8V voltage monitor – U10

The MitySOM-AM57(F) Development Board features an AD7995YRJZ I2C accessible 4 channel ADC which is used to measure/monitor the +5V, +3.3V, +2.5V, and +1.8V supplies generated on the Development Board. Please reference Table 5 for I2C5 address information.

The table below lists each channel, the voltage that it measures, and any resistor divider ratio used.

Table 24

U10 Pin	ADC Channel	Voltage Monitored	Ratio	Expected Value at Stated Voltage
3	0	+5.0V	0.5/volt	2.50V
4	1	+3.3V	0.5/volt	1.65V
5	2	+1.8V	1.0/volt	1.8V
6	3	+2.5V	1.0/volt	2.5V

Module Configuration Jumpers

Boot Configuration Jumper – JP8

The MitySOM-AM57(F) can be configured to boot using 2 different boot sequences according to the BOOTMODE jumper on the development board, JP8. The pin is pulled up to +1.8V on the SOM and results in the default boot mode being the "high" mode shown below. If the "low" mode is desired a jumper should be installed across JP8 which will cause the BOOTMODE pin of the MitySOM-AM57(F) (J10 – Pin 74) to be pulled to GND.

JP8 Removed (Default) "high"

1. SD card (MMC1)
2. eMMC (MMC2)
3. HS USB2.0 (USB1)

JP8 Installed "low"

1. On SOM Quad SPI NOR (QSPI1)
2. SD card (MMC1)
3. HS USB2.0 (USB1)

Please see the "AM57xx Boot Media Mode" section in the MitySOM-AM57(F) Datasheet for additional details.

FPGA IO Voltage Select Jumper – JP4/JP5/JP6

The Artix-7 FPGA user-controlled banks on the MitySOM-AM57(F) feature user-selectable IO voltages. On the MitySOM-AM57x Development Board VCCO_34 and VCCO_15 are powered by the same voltage, Vselect. This voltage level, either +3.3V, +2.5V, or +1.8V is selected by which jumper is installed on either JP4, JP5, or JP6. The table below lists the jumper settings.

Table 25: JP4, JP5, and JP6 Jumper Settings

JP4 (+3.3V)	JP5 (+2.5V)	JP6 (+1.8V)	VCCO 34 Voltage	VCCO 15 Voltage
Installed	Not Installed	Not Installed	+3.3V	+3.3V
Not Installed	Installed	Not Installed	+2.5V	+2.5V
Not Installed	Not Installed	Installed	+1.8V	+1.8V

Note that only one jumper should be installed at a given time.

PMIC Power Hold Jumper – JP7

The MitySOM-AM57(F) Development Board features a 3-pin jumper header to control the state of the PMIC_POWERHOLD signal to the module, J10 – Pin E3-7. By default, no jumper is installed on this header. The jumper settings are documented in the following table.

Table 26: J7 Settings

JP7 Setting	Module Power State
Pin 1 & 2 Shorted	Pulled High (+1.8V) Module is always on
Pin 2 & 3 Shorted Or All Pins Floating	(Default) Software control of module power through the PMIC on the MitySOM-AM57(F) module

Please see the MitySOM-AM57(F) Datasheet for additional details about the PMIC_POWERHOLD feature.

SOM Manual Reset Switch – S2

When switch S2 is pressed it connects the PB_RESETn signal to GND which causes the AM57xx processor on the MitySOM-AM57(F) to reset.

Included Components

The following table lists the components that are included with a MitySOM-AM57(F) Development Kit. See Table 28 for specific development kit ordering information.

Table 27: Included Items

Description	Interface Port	Qty. Included
MitySOM-AM57(F) Development Kit Board	n/a	Qty. 1
MitySOM-AM57 or AM57F Module	n/a	Qty. 1
Micro USB Cable	J16	Qty. 1
12V 3.34A AC to DC Supply	P1	Qty. 1
Ethernet cable – 7 foot	J8 & J9	Qty. 1
Development Kit Schematic Files	n/a	
Development Kit Gerber Drawings	n/a	
Development Kit Bill Of Materials	n/a
