Subject: Cypress Part Status Change on CY8C201xxx Products

Dear Distribution Partner,

We would like to inform you about our intent to change the part status for our CY8C201xx CapSense Express family of products. These products leverage our first-generation CapSense technology. We are now introducing our fourth-generation CapSense technology embedded in our PSoC 4 S-Series device family that is sampling today. The CY8C201xx CapSense Express family of products' part status will be updated to "Not recommended for new designs." Cypress recommends customers use our [CapSense MBR3](#) solutions or [PSoC 4](#)-based solutions for any new designs. These solutions deliver superior performance and capabilities.

We are committed to support our existing customers that use these products today. This part number status change has no impact to the shipment and manufacturing of these products to support existing designs and design opportunities.

We need your help in communicating the part status change to your respective customers.

As always, Cypress remains fully committed to supporting your product and application needs.

Sincerely,

Regards,
