Product Change Notice

PCN No. 2014-005

Date: 23 July 2014

Part Number: VBI1094A

Description: BNC Isolated panel mount Jack Connector

Effective Date: 3rd September 2014

Description of change

The new part has no dimensional changes that would affect normal form fit or function. The ground terminal of the new part (left of image) is approximately 2mm shorter than the old version. The new part also has a thicker nut at 4.7mm compared with 4mm for the old version.

Reason for change

The manufacturing tooling for the old part is no longer serviceable.

Anticipated impact of the change

The thicker nut limits the maximum panel thickness to approximately 3.5mm.

Form, fit or function is not affected by the above amendments.

Emerson notifies our customers of major changes that may affect device form, fit, function, quality, or reliability. Emerson reserves the right to make changes on products without notice when such changes are considered minor and do not interfere with the general purpose (form, fit, function, quality, or reliability) for which such items are manufactured. If a change affects published specifications, the specifications will be updated the next time the datasheet is published. Any requests for samples of changed material or additional information must be made within 30 days of the notification.
