

Dear Digilent Customers,

Despite our hopes and effort to create an innovative and low-cost T&M solution, we've received consistent negative feedback on the OpenScope and OpenLogger regarding overall reliability and defects with the main feature set that has led us to determine that it is not up to our high standards for our test and measurement products.

Unfortunately, we are unable to fix many of the issues, so we have made the difficult decision to pull both products, and related accessories from our shelves. This will allow us to ensure we can continue to deliver on the Digilent brand promise and focus our efforts on expanding our popular and core line of Test and Measurement Products.

Part Number	Product Name	Reason
