Functions

Operation note

BluePilot: Blue indicator LEDs with double benefits

<p>Easy and quick sensor alignment with the help of the LED indicator</p> <p>All blue LEDs illuminate - optimum alignment - highest possible operating reserve</p>	<p>WLA photoelectric retro-reflection sensor alignment</p>
<p>Service note A reduction in sensor availability is displayed by a decrease of the blue LEDs.</p> <p>Possible causes: a) insufficient alignment b) contamination of the optical surfaces c) particles in the light beam</p>	

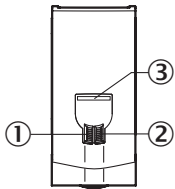

Operation note

At a sensing range of „x“ the photoelectric retro-reflective and through-beam photoelectric sensors have different operating reserves (see blue arrow). The higher the operating reserve factor, the better the sensor can compensate the contamination in the air or in the light beam and on the optical surfaces (front screen, reflector), i.e. the sensor has the maximum availability, otherwise the sensor switches due to pollution although there is no object in the path of the light beam.
