

Affected Products – RSE/RSOE series

Dear customers and distributors, we herewith inform you about Product Change Notice* concerning the following products:

RSE, RSOE series (all versions).

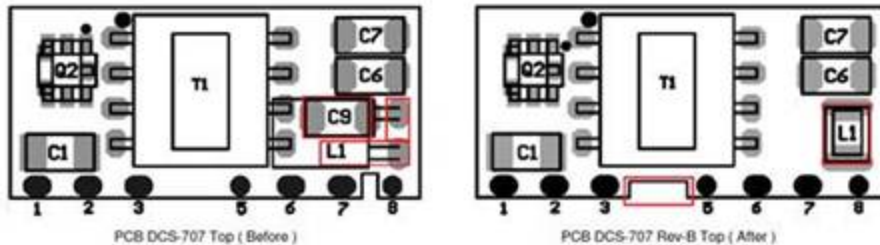

The electronics industry is moving to smaller-sized passive components and discontinuing the larger size formats. For example, 1206 resistor dimensions are migrating to 0805. It is therefore necessary to change the internal PCB layout of these products to accommodate the smaller standardized sizes.

We have also taken the opportunity to rearrange some the components on the PCB now we have more room and, in particular, to switch from through-hole to SMD-mount inductors. This is to improve the production yield and performance stability by increasing the automation grade of the converters.

There is no change to the datasheet specifications.

Series	Component (before)	Component (after)
RSE and RSOE	PCB code: DCS-707	PCB code: DCS-707 rev.B

The new PCB layout is identified by a notch between pins 3 and 5 so that it can be more easily identified by x-ray inspection after assembly.

Issue Date: 04 July 2019

Effective: As soon as existing stock is used up

Steve Roberts

Technical Director

RECOM Engineering, Gmunden,
Austria

* Usually a Product Change Notice (PCN) is issued only when the product concerned has a change in the specifications. In this particular case, there are internal changes, but the datasheet specifications remain unchanged. It is issued for information only.
