### Description

The MADP-011104 is a high-power PIN diode assembled in a lead-free 3 mm 12-lead QFN plastic package. This shunt device provides exceptional switch or attenuator performance from 50 MHz to 5 GHz.

This compact device is ideally suited to switch and attenuator applications from HF through S band, where higher peak and CW power, lower loss, and higher linearity surface-mount diode assemblies are required.

5. Exceeding any one or combination of these limits may cause permanent damage to this device.
6. MACOM does not recommend sustained operation near these survivability limits.
7. Power levels specified are for cold switching. MACOM recommends cold switching only.
8. Operating at nominal conditions with  $T_J \leq +175^\circ\text{C}$  will ensure  $\text{MTTF} > 1 \times 10^6$  hours.

**Handling Procedures**

Please observe the following precautions to avoid damage:

**Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM Class 1C and CDM Class C5 devices.
