NTE944 & NTE944M Integrated Circuit Programmable Operational Amplifier

Description:

The NTE944 (8-Lead Metal Can) and NTE944M (8-Lead MiniDIP) are extremely versatile programmable monolithic operational amplifiers. A single external master bias current setting resistor programs the input bias current, input offset current, quiescent power consumption, slew rate, input noise, and the gain-bandwidth product. These devices are truly general purpose operational amplifiers.

Features:

- $\pm 1V$ to $\pm 18V$ power supply operation
- 3nA input offset current
- Standby power consumption as low as 500nW
- No frequency compensation required
- Programmable electrical characteristics
- Offset voltage nulling capability
- Can be powered by two flashlight batteries
- Short circuit protection

Absolute Maximum Ratings:

Supply Voltage	$\pm 18V$
Power Dissipation (Note 1)	500mW
Differential Input Voltage	$\pm 30V$
Input Voltage (Note 2)	$\pm 15V$
I_{SET} Current	150 μA
Output Short Circuit Duration	Indefinite
Operating Temperature Range	$0^{\circ} \leq T_A \leq +70^{\circ}C$
Storage Temperature Range	-65° to $+150^{\circ}C$
Lead Temperature (Soldering, 10sec)	$+300^{\circ}C$

Note 1. The maximum junction temperature of the NTE944 is $100^{\circ}C$. For operating at elevated temperatures, the NTE944 must be derated based on a thermal resistance of $150^{\circ}C/W$ junction to ambient, or $45^{\circ}C/W$ junction to case. The thermal resistance of the NTE944M is $+125^{\circ}C/W$.

Note 2. For supply voltages less than $\pm 15V$, the absolute maximum input voltage is equal to the supply voltage.

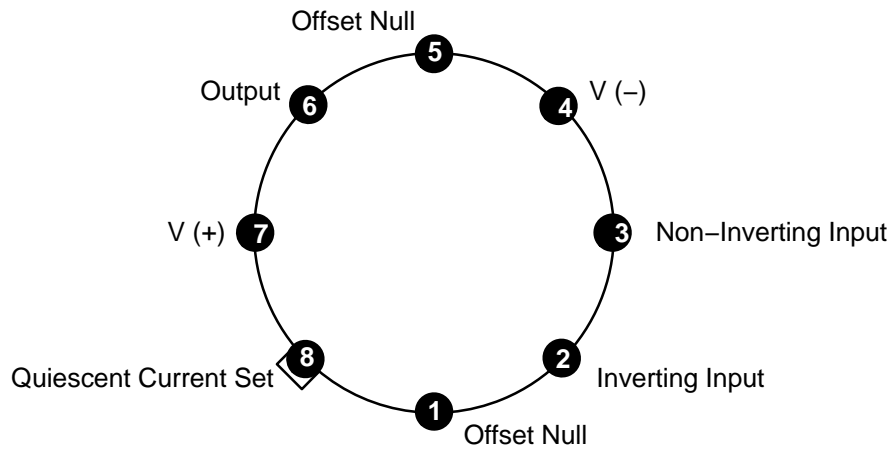

Electrical Characteristics: ($0^{\circ} \leq T_A \leq +70^{\circ}\text{C}$, unless otherwise specified)

Parameter	Test Conditions		$I_{SET} = 1\mu\text{A}$		$I_{SET} = 10\mu\text{A}$		Unit
			Min	Max	Min	Max	
V_{OS}	$V_S = \pm 1.5\text{V}$	$T_A = +25^{\circ}\text{C}, R_S \leq 100\text{k}\Omega$	–	5	–	6	mV
