

Affected Products - AC/DC "K-Series"

Dear customers,

We herewith inform you that to support our smart manufacturing process and traceability we have changed the datecode marking on our "K-Series" AC/DC products.

Currently, the products are identified with a datecode laser marked on top of the housing. After the change a separate lot number label with a machine-readable Datamatrix 2D-Code along with the datecode will be affixed to the side of the product.

There is no change to the performance or specification of the products.

Details about affected Product series:

Before: Datecode "YYWW" laser marked on top side of product

After: 2D-Code + Lot Number (Datecode "YYWW") attached to side of product
