SOLAHD

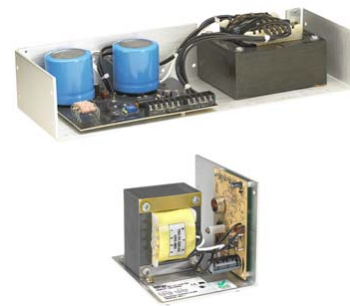

SolaHD™ SL Series Single and Multi Output Power Supplies

SL (Silver Line) Series Certifications Update

Effective immediately, the [SolaHD SL Silver Line Series](#) of linear power supplies by Emerson will no longer carry the CE mark.

As with other legacy power supplies, it is not feasible to reinstate the CE certification for many legacy power supplies, due to recent changes to CE certification requirements. Effective immediately, we are no longer able to sell these products into Europe regardless of manufacturing date. The units will still bear the cRUus mark for the US and Canada. The SL series products can still be sold, and used in applications, in the US and Canada. However, they cannot be used in applications sold into Europe, or any other country requiring the CE certification.

Note that while we do not plan to phase out the SL Series at this time, they are not recommended for new applications. Updates to the product line are no longer feasible. Also, while a few of the SL parts may have similar input and output specifications as the SVL Series or SCP Series, there is no direct replacement available or close alternative for the SL Series open style linear power supplies.

For additional information about SolaHD SL Series Power Supplies contact Technical Support at solahd.technicalservices@emerson.com.
