*1 Because V2 - V3 is isolated, V3 can be as used -VOUT.
 *2 Peak load for 10sec. or less is acceptable if the peak total wattage is less than the rated wattage(-1: 33W, -2: 34.5W, -3: 34.5W, -4: 34.5W).When the load of V1 is 0A, other output can be drawn by 80% of rated current.
 *3 Measured by 20MHz oscilloscope or Ripple-Noise meter (equivalent to KEISOKU-GIKEN:RM101).

*4 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C with the input voltage held constant at the rated input/output.
 *5 Adjustment of output voltage for V1 (+5V+5%) is possible (Optional). Please refer to 2.5 minimum output current and 4.2 derating.
 *6 Please contact us about safety approvals for the model with option.
 * Avoid prolonged use under over-load.
