Bourns® SRP-LAB4 High Current, Shielded Power Inductor Design Kit to be Discontinued

Effective immediately, Bourns has discontinued the Magnetics Design Kit SRP-LAB4, containing the high current, shielded power inductor series SRP5030T, SRP6540 and SRP7028A. The discontinuance is due to the introduction of two similar performance, automotive grade series, Models SRP5020TA and SRP5030TA, which are included in the suggested replacement Design Kit, Model SRP-A-LAB3. *(The products within the design kit will remain available; only the design kit itself is discontinued.)*

The suggested replacement Magnetics Design Kit is the automotive grade SRP-A-LAB3, which contains the AEC-Q200 compliant series SRP5020TA, SRP5030TA and SRP7028A.

Obsolete Design Kit	Suggested Replacement Design Kit
SRP-LAB4	SRP-A-LAB3
