RE: Formula changes on VZ solvent products

To whom it may concern:

Chemtronics VZ solvent cleaning products have been revised to alleviate supply chain issues and ensure reliable supply. These changes go into effect this month. All products have been stringently tested to guarantee they meet the same exceptional performance and regulatory criteria.

You can identify the correct SDS by reference number 22346, which is included in the document name and in section 1. The lot # printed on the bottom of the aerosol can will either match or be higher. Labels will also be marked "New & Improved" for easy identification.

Marked 22346 or higher:                    part #

- Electro-Wash VZ..... ES6100, ES6119
- Flux-Off VZ ..... ES6200
- Pow-R-Wash VZ..... ES6300

Our in-house qualification lab is available to help with any addition testing that is needed for your specific application. Please feel free to contact me if you have any questions or concerns.
