ATERA[®]
MEASURABLE ADVANTAGE™

Powering Your Innovation – PowerSoC

Key Intellectual Property

High-frequency power conversion
Magnetics engineering
Power packaging and construction

Integrated Power Management Systems

Engineered Turnkey Solutions

Fully simulated, characterized, and validated
System-level qualified
Eliminates inductor and capacitor selection

PowerSoC Comparison

PowerSoC – 25% to 50% smaller footprint than alternative solutions:

Competitors' Modules

Competitors' Discrete Regulators

Benefits of PowerSoC

Addressing today's and tomorrow's system power design challenges:

Highest Power Density and Smallest Footprint

Greatly minimizes the amount of PCB space and height profile required for point-of-load regulation compared to alternative discrete switching regulators and modules.

High Efficiency and Thermal Performance

Optimized with up to 96 percent efficiency. High-efficiency devices are industrial graded, with most products not requiring load de-rating or air flow at 85° C ambient temperature.

Lowest Component Count and Higher Reliability

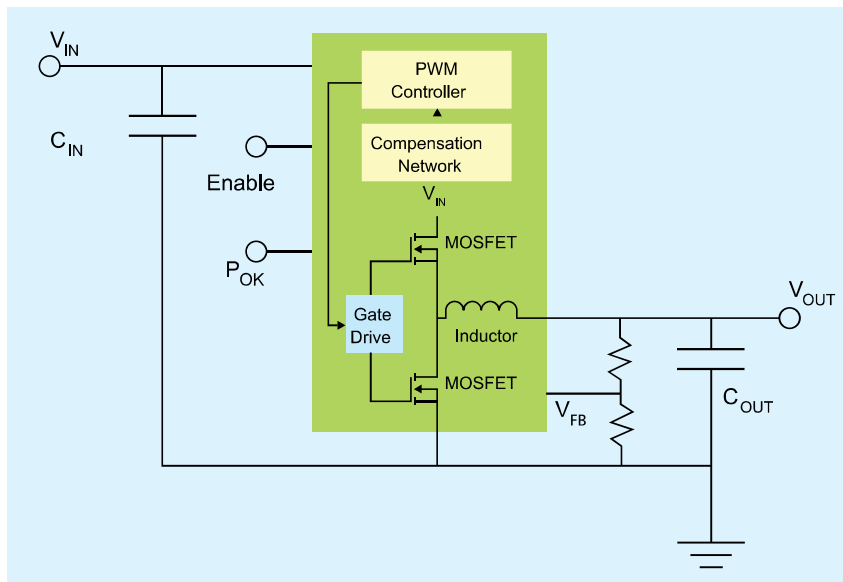

PowerSoCs are specified, simulated, characterized, validated, and manufacturing-tested as a complete power system. Fewer components and tightly controlled IC manufacturing processes permit an unsurpassed 45,000-year MTBF reliability.

Ease of Design and Fastest Time to Market

PowerSoCs with integrated inductor and compensation enable turnkey designs. Development requires fewer design steps with significantly less exposure to design iteration versus discrete switching regulators.

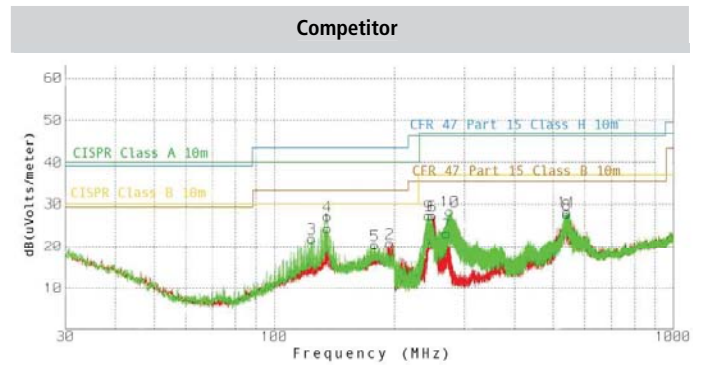

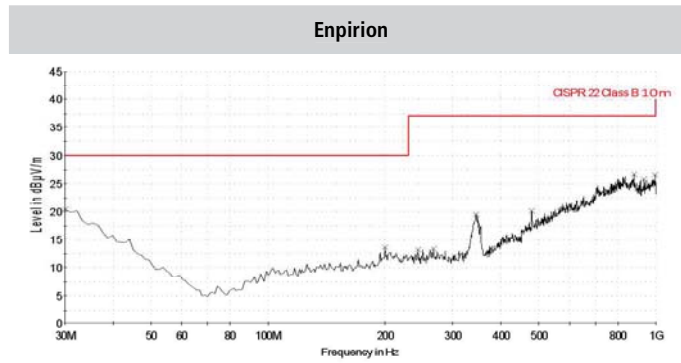

Fully Validated Power Solutions

Fully validated PCB layout and design files enable customers nearly 100 percent first-pass success.

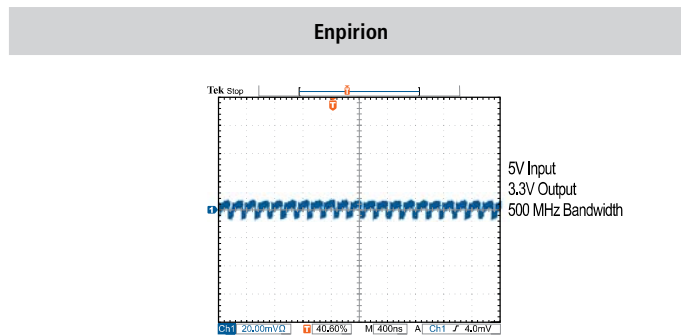

Take A Closer Look

Low Radiated Noise

Low Ripple

Fast Dynamic Response

Applications

Market pressures are driving equipment manufacturers to add more features, functionality, and higher bandwidth while moving to smaller form factors and targeting improved energy efficiency. The newest 28 nm and 20 nm FPGAs, processors, and other SoCs address these challenges, in part, by implementing more granular and precise levels of power management. The result is an escalating number of power rails, complex power-up sequencing requirements, and tighter noise tolerances. Enpirion® power solutions from Altera meet these power design challenges and are broadly used in many applications.

Computer

- Server motherboards
- NIC and HBA cards
- RAID controllers
- Micro servers

Networking and Telecommunications

- Radio basestation (macro, pico, femto)
- Backhaul (microwave, wireline)
- Media gateway (ATCA/AMC)

Industrial and Embedded

- Security systems/digital video recorder (DVR)
- Industrial computing
- Industrial communication modules

Enterprise Storage

- Solid State Drives (SSD):
SATA, SAS, mSATA, PCI Express® (PCIe®)
- Storage systems

Test and Measurement

- Network analyzers
- Automated test equipment (ATE)
- Data acquisition
- Scopes, analyzers, signal generators

Optical Networking

- Optical Modules:
SFP, XFP, CXP, CFP
- Active optical cable
- Reprogrammable add/drop mux

Notes

- Maximum $V_{OUT} = V_{IN} - V_{DROPOUT}$ where $V_{DROPOUT} = R_{DROPOUT} \times \text{Load Current}$. Reference device datasheet to calculate $V_{DROPOUT}$. Typical $V_{DROPOUT} = 0.4V$.
- [x] = "8" for PWM only; "7" for Light Load mode

Definitions

- Qualified to industrial (I) ambient temperature range: -40°C to +85°C
- VID = Output voltage programming using Voltage ID code pins
- Margining = The ability to force V_{OUT} out of regulation by a selectable percentage (via 2 pins)
- Input/Output Sync = ability to control frequency of the regulator(s) to reduce input/output voltage ripple
- Size estimate for single-sided PCB including all suggested external components

Special Function Products

Product	Description
ES1010QI	12V power distribution hot swap controller
ES1022QI	Sequencer with 4 delay adjustable sequenced outputs with input voltage monitoring
ES1020QI	Sequencer with 4 delay adjustable sequenced outputs with input voltage monitoring; supplies gate drive for external FETs
ES1021QI	Sequencer with 4 delay adjustable sequenced outputs with input voltage monitoring; supplies gate drive for external FETs; groups 4 channels into 2 groups each with their own enable

Notes

1. Reference device datasheet for V_{DROPOUT} value
2. Meets accuracy, ripple, and transient requirements for FPGA core rails.
3. Low-output voltage ripple and meets CISPR 22 Class B emissions standard.
