Chris Slinkman - Product Manager  
Subject: Notice of a Tooling Change

---

## Implementation Date: July 2011

In an attempt to improve the performance in molding the 44441 series product, we have made some modifications to the latch in these molds. These changes effect the latch of the part and are shown in the pictures below. We have added draft to these molds to help the part release allowing Molex to run a more robust process. No other changes have been made that would effect the form, fit, or function of this part. See attached presentation for a detailed description of the dimensional changes.

Affected parts	
444412003	444411003
444412004	444411004
444412005	444411005
444412006	444411006

We are sorry for the late notice and any inconvenience this may have caused. If you have any question or concerns, please contact us.
