Cherry / ZF Electronics Reps and Distributors:

Product Bulletin: Cherry Sensors

To maintain continuity of supply, we are substituting a Macromelt material currently used as potting for the Cherry line of Sensor products. Other than the color of the material, there have been no physical or specification changes to the design and function of the product and does not warrant an engineering change notice. The current material (Macromelt OM 678 {black color}) and the new alternative material (Macromelt OM 673 {beige color}) have the exact specifications other than color.

This change in potting color is short term and is expected to return to the Macromelt OM678T black color when material availability is improved. Please contact your Cherry Representative with any questions you may have.
