LF PCN# A0090 Notification of label change on HEV OHEV050.ZXPCB2 fuse

Dear Valued Customer,

In response to market demands, Littelfuse validated our standard 50A HEV **OHEV050.ZXPCB2** fuse to a higher voltage rating than originally indicated on the label and datasheet. Our testing has successfully validated the 50A HEV fuse for use in customer applications up to 275VAC.

No changes have been made to the base fuse design or assembly processes, but the product label has been adjusted to show the new and improved voltage rating. Test results are available upon request.

Old Labels with 2000A/250VAC

New Labels with 2000A/275VAC

Label 1

Please contact your local Littelfuse representative if you have any additional questions. We will be pleased to answer any questions you may have.

Thank you for your continued support.

Best Regards,

Jenny Kiolbasa
