The replacement is a 100% drop in product. The only difference between the two models is the addition of a DB9 connector on the BB-485LDRC9. This connector allows the use of a standard DB9 RS-232 cable. Terminal block connections for RS-232 remains an option for the BB-485LDRC9. Both products share the same design and component selection.

Thank You,

Brian Foster | Product Manager
