

DIGI TRANSPORT® LR54 LTE-A ROUTER

Fast, stable and secure.

Security threats have everyone scrambling to protect both IT networks and physical property. Criminals may be craftier than ever, but Digi has launched a secret weapon that makes it a fair fight: Digi TransPort LR54 is the fastest, most stable and secure router available for security and access control networks.

Stronger Security Everywhere

Modern security systems produce data at a rate and volume that cause ordinary routers to drag. When it comes to suspected security breaches, there's no time to lose.

Digi designed the TransPort LR54 router from the ground up to provide peerless speed and connection integrity for multi-point security systems that cover IP video, access control, and VOIP intercoms. This LTE-Advanced router has the memory capacity to deliver glitch-proof video transfer, and the processing horsepower to connect multiple devices. Digi TransPort LR54 keeps surveillance, access controls and alarms fast and dependable, for 24-hour peace of mind.

Ideal for Autonomous Networks

In situations where it is easier—and more secure—to “bring your own network” rather than tapping into an existing network, Digi TransPort LR54 is a turnkey, simple solution...and it requires no land line.

Digi TransPort LR54 Performance Thrills

- ✓ **Enterprise security**—fortified by PCI-certified Digi Remote Manager® and Digi TrustFence™
- ✓ **Rugged hardware**—industrial-grade aluminum housing, temperature hardened to operate at -20° to 70° C
- ✓ **Maximum speed**—LTE-Advanced radio provides CAT6 speeds up to 300Mbps—2X the speed of current CAT 3 LTE
- ✓ **Powerful and reliable Wi-Fi**—featuring dual 2.4 and 5GHz radios, with 802.11ac

Take it Outside

Digi TransPort LR54 is constructed with a heavy-duty aluminum enclosure that is sealed to withstand the elements, and tough enough to ward off physical intrusions. It provides thermal protection that keeps this LTE-A router running without fail in sub-zero winter weather and searing summer heat.

High Performance for Security System Networking

Digi engineers used your security strategy as our roadmap. Digi TransPort LR54 brings the full advantages of LTE-A to your networks.

Expand Visual Coverage

See more by setting up multiple cameras across your location. Digi makes it easier: you can network multiple cameras together over Wi-Fi, and use Digi TransPort LR54 as the take-out gateway.

Maintain Top Speeds

Digi uses gigabit Ethernet switches and gigabit Wi-Fi to eliminate the bottlenecks that typically occur between high speed Wi-Fi and and LTE-A routers.

Low Cost of Ownership

Digi TransPort LR54 is priced significantly lower than its competitors. It carries a 3-year warranty. You'll pay no annual software fees. Plus, technical support is included at no charge.

Centralized Device Configuration and Remote Management

Digi Remote Manager gives administrators a single dashboard for configuring and troubleshooting devices across multiple locations. They will be able to analyze network performance and check connectivity points at a glance.

Automated Updates

Digi TransPort LR54 automatically "phones home" to Digi Remote Manager to check for the newest firmware and to pull down any unique configurations.

Cloud Security

Digi Remote Manager provides a centralized, scalable tool for ensuring security across the entire network of remote devices. It is hosted in SSAE-16 certified facilities.

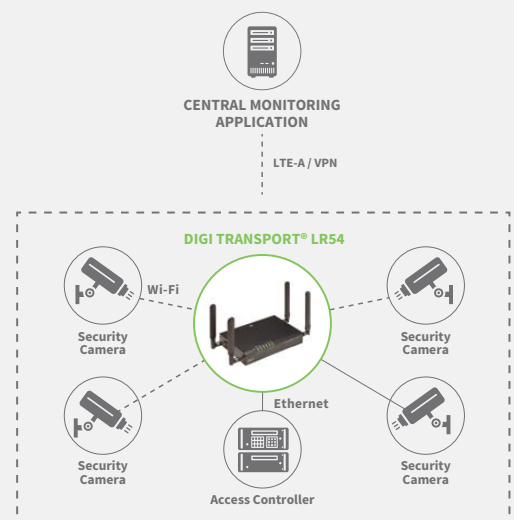

Global Ready

Digi TransPort LR54 has a single, software-defined LTE radio that supports carriers across North America and most European countries. Rather than qualify and support multiple devices, Digi TransPort LR54 gives you a single part number to cover two continents. And it comes pre-certified for Verizon and AT&T networks.

Extreme Network Security

Gain maximum security assurance through Digi's PCI-certified Digi Remote Manager, firewall, built-in-VPN and 256 bit AES encryption. Digi TrustFence device security framework addresses common security vulnerabilities of remote devices, from authenticated boot and secure device access, to user validation and data encryption.

LTE-A speed: 300 Mbps
2x faster than
conventional LTE in
real world testing

The Digi solution for security systems: Fast and stable. Rugged and secure.
