

Product Delivery Announcement

Dear Customer,

Following the completion of the merger between NXP Semiconductor Business Line “Bipolar Power” and JianGuang Asset Management (JAC Capital) the new company WeEn Semiconductors Ltd. was created on November 9th 2015. The Joint Venture, combining NXP’s advanced bipolar technology with JAC Capital’s strong connections in the Chinese manufacturing network and distribution channels is dedicated to deliver state-of-the-art, high quality and most cost efficient power discrete to our worldwide customer base.

Following NXP’s well known innovation and quality processes, WeEn Semiconductors keep on to develop new Power Discrete solution to satisfy our customer demand and cost concerns.

In this respect, we decided to discontinue NUR460P product family in December 2015 as we strongly believe Axial Lead package types will not provide new edge technology and advantage in manufacturing cost. We are working on new solution to be offered to the market in due time.

We informed end customers about the discontinuity via the PCN process of NXP. We appreciate customers understand this decision and will support WeEn as their new supplier. We will make sure and support last time buy deliveries to customer until Oct end of 2016.
